

## Nanoantibody anti Mouse for IP (HRP)

CatalogNo: RS0092

### Key Features

#### Reactivity

- Mouse

#### Conjugate

- HRP

#### Applications

- WB, mIHC, ELISA

### Storage

**Storage\*** 2-8°C, Ship by ice bag

### Recommended Dilution Ratios

**WB 1:2000-10000**

**mIHC/IF 200-500**

**ELISA 5000-50000**

### Basic Information

**Source** Camel, VHH his-tag

**Purification** Camel, VHH his-tag

### Immunogen Information

#### Specificity

This antibody is immunoblotting reagents that enable the trouble-free detection of immunoblotted target protein bands, without interference from denatured IgG. This allows to detect the (co-)immunoprecipitated protein without masking by the IgG heavy (50 kDa) and light chains (25 kDa). In general, this interference tends to originate from secondary antibodies which recognize primary antibodies released with the antigen during the immunoprecipitation procedure or endogenous IgGs from the lysate itself. This antibody only recognize native (non-reduced) antibodies and therefore the detection of heavy and light chains is highly minimized. This antibody has no reaction with Rabbit/Human IgGs.

## Target Information

Protein Name

## Validation Data

Immunoprecipitating GAPDH in HeLa whole cell lysate with mouse anti GAPDH antibody (Catalog YM3029). Western blot was performed on the immunoprecipitate using anti-GAPDH antibody at 1:5000 dilution, and followed by the HRP labeled anti-Mouse IgG antibody at 1:3000 dilution. Lane 1 (Input): 20ug HeLa whole cell lysate. Lane 2 (-): Mouse monoclonal IgG1 Isotype Control (Catalog VN0001, ) instead of GAPDH antibody in HeLa whole cell lysate. Lane 3 (+): 6ug GAPDH antibody IP in 1000ug HeLa whole cell lysate

Mouse IgG for IP was diluted at 1:3000 to detect non-reduced or reduced different forms of mouse IgG, 1ug/lane
