

Nanoantibody anti Mouse Kappa

CatalogNo: RS0093

Key Features

Reactivity

- Mouse

Applications

- WB,ELISA

Storage

Storage* -15°C to -25°C/1 year (Do not lower than -25°C)

Recommended Dilution Ratios

WB 1:2000-10000,ELISA 5000-50000

Basic Information

Source Camel, VHH his-tag

Purification Camel, VHH his-tag

Immunogen Information

Specificity

This antibody is immunoblotting reagents that enable the trouble-free detection of immunoblotted target protein bands, without interference from denatured IgG. This allows to detect the (co-)immunoprecipitated protein without masking by the IgG heavy (50 kDa) and light chains (25 kDa). In general, this interference tends to originate from secondary antibodies which recognize primary antibodies released with the antigen during the immunoprecipitation procedure or endogenous IgGs from the lysate itself. This antibody only recognize native (non-reduced) antibodies and therefore the detection of heavy and light chains is highly minimized. This antibody has no reaction with Rabbit/Human IgGs.
