

# Nanoantibody anti Mouse Kappa HRP

CatalogNo: RS0094

## Key Features

### Reactivity

- Mouse

### Conjugate

- HRP

### Applications

- WB, mIHC, IF, ELISA

## Storage

**Storage\*** -15°C to -25°C/1 year (Do not lower than -25°C)

## Recommended Dilution Ratios

**WB 5000-20000 mIHC/IF 200-500, ELISA 5000-50000**

## Basic Information

**Source** Camel, VHH his-tag

**Purification** Camel, VHH his-tag

## Immunogen Information

### Specificity

This antibody is immunoblotting reagents that enable the trouble-free detection of immunoblotted target protein bands, without interference from denatured IgG. This allows to detect the (co-)immunoprecipitated protein without masking by the IgG heavy (50 kDa) and light chains (25 kDa). In general, this interference tends to originate from secondary antibodies which recognize primary antibodies released with the antigen during the immunoprecipitation procedure or endogenous IgGs from the lysate itself. This antibody only recognize native (non-reduced) antibodies and therefore the detection of heavy and light chains is highly minimized. This antibody has no reaction with Rabbit/Human IgGs.
