

# PAKy Mouse mAb

CatalogNo: YM0502

## Key Features

Host Species

Mouse

ReactivityHuman, Monkey

ApplicationsWB,IHC,IF,ELISA

MW • 58kD (Calculated)

#### **Recommended Dilution Ratios**

WB 1:500-1:2000 IHC 1:200-1:1000 IF 1:200-1:1000 ELISA 1:10000 Not yet tested in other applications.

### **Storage**

Storage\*-15°C to -25°C/1 year(Do not lower than -25°C)FormulationLiquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide.

### **Basic Information**

Clonality Monoclonal

## Immunogen Information

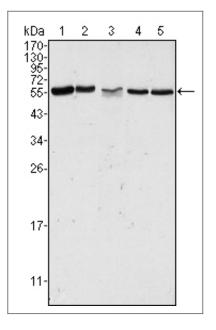

ImmunogenPurified recombinant fragment of PAKγ expressed in E. Coli.SpecificityPAKγ Monoclonal Antibody detects endogenous levels of PAKγ protein.

# Target Information

www.immunoway.com.cn

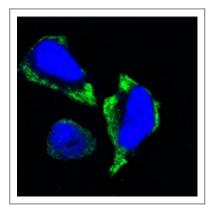

Gene name	PAK2			
Protein Name	Serine/threonine-protein kinase PAK 2			
	Organism	Gene ID	UniProt ID	
	Human	<u>5062;</u>	<u>Q13177;</u>	
	Mouse		<u>Q8CIN4;</u>	
Cellular Localization	[Serine/threonine-protein kinase PAK 2]: Cytoplasm. MYO18A mediates the cellular distribution of the PAK2-ARHGEF7-GIT1 complex to the inner surface of the cell membrane.; [PAK-2p34]: Nucleus. Cytoplasm, perinuclear region. Membrane; Lipid-anchor. Interaction with ARHGAP10 probably changes PAK-2p34 location to cytoplasmic perinuclear region. Myristoylation changes PAK-2p34 location to the membrane.			
Tissue specificity	Ubiquitously expressed. Higher levels seen in skeletal muscle, ovary, thymus and spleen.			
Function	Catalytic activity:ATP + a protein = ADP + a phosphoprotein.,enzyme regulation:Activated by binding small G proteins. Binding of GTP-bound CDC42 or RAC1 to the autoregulatory region releases monomers from the autoinhibited dimer, enables phosphorylation of Thr-402 and allows the kinase domain to adopt an active structure (By similarity). Following caspase cleavage, autophosphorylted PAK-2p34 is constitutively active.,Function:The activated kinase acts on a variety of targets. Phosphorylates ribosomal protein S6, histone H4 and myelin basic protein. Full length PAK 2 stimulates cell survival and cell growth. The process is, at least in part, mediated by phosphorylation and inhibition of pro-apoptotic BAD. Caspase-activated PAK-2p34 is involved in cell death response, probably involving the JNK signaling pathway. Cleaved PAK-2p34 seems to have a higher activity than the CDC42- activated form.,PTM:During apoptosis proteolytically cleaved by caspase-3 or caspase-3-like proteases to yield active PAK-2p34.,PTM:Full length PAK 2 is autophosphorylated when activated by CDC42/p21. Following cleavage, both peptides, PAK-2p27 and PAK-2p34, become highly autophosphorylated, with PAK-2p27 being phosphorylated on serine and PAK-2p34 on threonine residues, respectively. Autophosphorylation of Thr-402, because PAK-2p27 is acting as an exogenous substrate.,PTM:PAK-2p34 is myristoylated.,PTM:Ubiquitinated, leading to its proteosomal degradation.,similarity:Belongs to the protein kinase superfamily.,similarity:Belongs to the protein kinase superfamily. STE Ser/Thr protein kinase family. STE20 subfamily.,similarity:Contains 1 CRIB domain.,similarity:Contains 1 protein kinase domain.,subcellular location:Interaction with ARHGAP10 probably changes PAK-2p34 location to cytoplasmic perinuclear region. Myristoylation changes PAK-2p34 location to the membrane.,subunit:Interacts tightly with GTP-bound but not GDP-bound CDC42/p21 and RAC1. Interacts with ARHGAP10, Interacts with and activated by HIV-1 Nef. PAK-2p34 interacts with ARHGAP10			

## Validation Data

Immunohistochemistry analysis of paraffin-embedded human lung cancer (left) and gastric cancer (right) with DAB staining using PAK $\gamma$  Monoclonal Antibody.

Confocal immunofluorescence analysis of Hela cells using PAKγ Monoclonal Antibody (green). Blue: DRAQ5 fluorescent DNA dye.
