

NUP98 Mouse mAb

CatalogNo: YM1066

| Key Features

Host Species

- Mouse

Reactivity

- Human, Mouse, Dog

Applications

- WB

MW

- 198kD (Calculated)

| Recommended Dilution Ratios

WB 1:1000-1:2000

Not yet tested in other applications.

| Storage

Storage*

-15°C to -25°C/1 year(Do not lower than -25°C)

Formulation

Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide.

| Basic Information

Clonality

Monoclonal

| Immunogen Information

Immunogen

Purified recombinant human Nup98 protein fragments expressed in E.coli.

Specificity

Nup98 Monoclonal Antibody detects endogenous levels of Nup98 protein.

| Target Information

Gene name

NUP98

Protein Name	Nuclear pore complex protein Nup98-Nup96		
	Organism	Gene ID	UniProt ID
	Human	4928;	P52948;
Cellular Localization	Nucleus membrane ; Peripheral membrane protein; Nucleoplasmic side . Nucleus, nuclear pore complex . Nucleus, nucleoplasm . Localized to the nucleoplasmic side of the nuclear pore complex (NPC), at or near the nucleoplasmic basket (PubMed:11839768). Dissociates from the disassembled NPC structure early during prophase of mitosis (PubMed:12802065). Colocalized with NUP153 and TPR to the nuclear basket of NPC (PubMed:11839768). Colocalized with DHX9 in diffuse and discrete intranuclear foci (GLFG-body) (PubMed:11839768, PubMed:28221134). . ; Nucleus membrane . (Microbial infection) Remains localized to the nuclear membrane after poliovirus (PV) infection. .		
Tissue specificity	Brain,Epithelium,Liver,Lung,Peripheral blood,Testis,		
Function	Disease:A chromosomal aberration involving NUP98 is associated with pediatric acute myeloid leukemia (AML) with intermediate characteristics between M2-M3 French-American-British (FAB) subtypes. Translocation t(9;11)(p22;p15) with PSIP1/LEDGF. The chimeric transcript is an in-frame fusion of NUP98 exon 8 to PSIP1/LEDGF exon 4.,Disease:A chromosomal aberration involving NUP98 is found in a form of acute myeloid leukemia. Translocation t(7;11)(p15;p15) with HOXA9. Translocation t(11;17)(p15;p13) with PHF23.,Disease:A chromosomal aberration involving NUP98 is found in a form of T-cell acute lymphoblastic leukemia (T-ALL). Translocation t(3;11)(q12.2;p15.4) with LNP1.,Disease:A chromosomal aberration involving NUP98 is found in a form of therapy-related myelodysplastic syndrome. Translocation t(11;20)(p15;q11) with TOP1.,Disease:A chromosomal aberration involving NUP98 is found in childhood acute myeloid leukemia. Translocation t(5;11)(q35;p15.5) with NSD1. Translocation t(8;11)(p11.2;p15) with WHSC1L1.,Domain:Contains G-L-F-G repeats.,Function:Nup98 and Nup96 play a role in the bidirectional transport across the nucleoporin complex (NPC). The repeat domain in Nup98 has a direct role in the transport.,PTM:Isoform 1 to isoform 4 are autoproteolytically cleaved to yield Nup98 and Nup96 or Nup98 only, respectively. Cleaved Nup98 is necessary for the targeting of Nup98 to the nuclear pore and the interaction with Nup96.,similarity:Belongs to the nucleoporin GLFG family.,similarity:Contains 1 peptidase S59 domain.,subcellular location:Nup96 is localized to the nucleoplasmic side of the nuclear pore complex, at or near the nucleoplasmic basket.,subunit:Nup98 interacts directly with Nup96. Nup96 is part of the Nup160 subcomplex in the nuclear pore which is composed of Nup160, Nup133, Nup107 and Nup96. This complex plays a role in RNA export and in tethering Nup98 and Nup153 to the nucleus. May interact with RAE1. Interacts with vesicular stomatitis virus protein M.,		

| Validation Data

Western Blot analysis using Nup98 Monoclonal Antibody against HeLa, Jurkat, MCF7 cell lysate.
