

# p300 (PTR2539) Mouse mAb

CatalogNo: YM4680

## **Key Features**

**Host Species** 

Mouse

Reactivity

Isotype

IgG

Human, Mouse,

**Applications** WB,IF,ELISA

MW

264kD (Calculated)

264kD (Observed)

## **Recommended Dilution Ratios**

WB 1:500-2000 IF 1:100-500

ELISA 1:1000-5000

#### Storage

Storage\* -15°C to -25°C/1 year(Do not lower than -25°C)

**Formulation** PBS, 50% glycerol, 0.05% Proclin 300, 0.05%BSA

#### **Basic Information**

**Clonality** Monoclonal

**Clone Number** PTR2539

## Immunogen Information

**Immunogen** Synthesized peptide derived from human p300 AA range: 1-100

**Specificity** This antibody detects endogenous levels of p300 protein.

#### | Target Information

Gene name

EP300

**Protein Name** 

Histone acetyltransferase p300

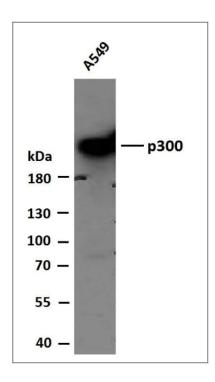

Organism	Gene ID	UniProt ID	
Human	<u>2033;</u>	<u>Q09472;</u>	
Mouse		B2RWS6;	

#### Tissue specificity Epithelium, Skin,

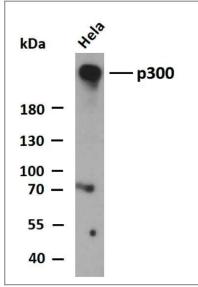

#### **Function**

Catalytic activity:Acetyl-CoA + histone = CoA + acetylhistone.,Disease:Chromosomal aberrations involving EP300 may be a cause of acute myeloid leukemias. Translocation t(8;22)(p11;q13) with MYST3., Disease: Defects in EP300 are a cause of Rubinstein-Taybi syndrome (RSTS) [MIM:180849]. RSTS is an autosomal dominant disorder characterized by craniofacial abnormalities, broad thumbs, broad big toes, mental retardation and a propensity for development of malignancies., Disease: Defects in EP300 may play a role in epithelial cancer., Function: Functions as histone acetyltransferase and regulates transcription via chromatin remodeling. Acetylates all four core histones in nucleosomes. Histone acetylation gives an epigenetic tag for transcriptional activation. Binds to and may be involved in the transforming capacity of the adenovirus E1A protein. Mediates cAMPgene regulation by binding specifically to phosphorylated CREB protein. In case of HIV-1 infection, it is recruited by the viral protein Tat. Regulates Tat's transactivating activity and may help inducing chromatin remodeling of proviral genes., online information: P300/CBP entry, PTM: Acetylated on Lys at up to 17 positions by intermolecular autocatalysis., PTM: Citrullinated at Arg-2142 by PADI4, which impairs methylation by CARM1 and promotes interaction with NCOA2/GRIP1.,PTM:Methylated at Arg-580 and Arg-604 in the KIX domain by CARM1, which blocks association with CREB, inhibits CREB signaling and activates apoptotic response. Also methylated at Arg-2142 by CARM1, which impairs interaction with NCOA2/GRIP1.,PTM:Phosphorylated.,similarity:Contains 1 bromo domain., similarity: Contains 1 KIX domain., similarity: Contains 1 ZZ-type zinc finger., similarity: Contains 2 TAZ-type zinc fingers., subunit: Interacts with phosphorylated CREB1 (By similarity). Interacts with DTX1, EID1, ELF3, FEN1, LEF1, NCOA1, NCOA6, NR3C1, PCAF, PELP1, PRDM6, SPIB, SRY, TCF7L2, TP53, SRCAP, TTC5, JMY and TRERF1. The TAZtype 1 domain interacts with HIF1A. Probably part of a complex with HIF1A and CREBBP. Part of a complex containing CARM1 and NCOA2/GRIP1. Interacts with ING4 and this interaction may be indirect. Interacts with ING5. Interacts with the C-terminal region of CITED4. Interacts with HTLV-1 Tax and p30II. Interacts with and acetylates HIV-1 Tat.,

#### **| Validation Data**

Whole cell lysates of A549 were separated by 6% SDS-PAGE, and the membrane was blotted with anti-p300(PTR2539) antibody. The HRP-conjugated Goat anti-Mouse IgG(H+L) antibody was used to detect the antibody. Lane 1: A549

Whole cell lysates of Hela were separated by 6% SDS-PAGE, and the membrane was blotted with anti-p300(PTR2539) antibody. The HRP-conjugated Goat anti-Mouse IgG(H + L) antibody was used to detect the antibody. Lane 1: Hela
