

Alkaline Phosphatase (PT1342R) PT™ Rabbit mAb

CatalogNo: YM9184 **Recombinant** 

Key Features

Host Species

- Rabbit

Reactivity

- Human, Mouse, Rat

Applications

- WB, IHC, IF, IP, ELISA

MW

- 57kD (Calculated)
- 80kD (Observed)

Isotype

- IgG, Kappa

Storage

Storage* -15°C to -25°C/1 year (Do not lower than -25°C)**Formulation** PBS, 50% glycerol, 0.05% Proclin 300, 0.05% BSA

Recommended Dilution Ratios

IHC 1:200-1:1000**WB 1:2000-1:10000****IF 1:200-1:1000****ELISA 1:5000-1:20000****IP 1:50-1:200**

Basic Information

Clonality Monoclonal**Clone Number** PT1342R

Immunogen Information

Specificity Endogenous

Target Information

Gene name ALPL

Protein Name Alkaline phosphatase tissue-nonspecific isozyme

| Organism | Gene ID | UniProt ID |
|----------|-------------------------|--------------------------|
| Human | 249 ; | P05186 ; |
| Mouse | 11647 ; | P09242 ; |
| Rat | 25586 ; | P08289 ; |

Cellular Localization

Cell membrane ; Lipid-anchor, GPI-anchor . Extracellular vesicle membrane ; Lipid-anchor, GPI-anchor . Mitochondrion membrane ; Lipid-anchor, GPI-anchor . Mitochondrion intermembrane space . Localizes to special class of extracellular vesicles, named matrix vesicles (MVs), which are released by osteogenic cells. Localizes to the mitochondria of thermogenic fat cells: tethered to mitochondrial membranes via a GPI-anchor and probably resides in the mitochondrion intermembrane space. .

Tissue specificity Brain,Cerebellum,Liver,Lymphoma,Osteosarcoma,Peripheral nerve,Semin

Function

Catalytic activity:A phosphate monoester + H(2)O = an alcohol + phosphate.,cofactor: Binds 1 magnesium ion.,cofactor: Binds 2 zinc ions.,Disease: Defects in ALPL are a cause of hypophosphatasia adult type (hypophosphatasia) [MIM:146300].,Disease: Defects in ALPL are a cause of hypophosphatasia childhood (hypophosphatasia) [MIM:241510].,Disease: Defects in ALPL are a cause of hypophosphatasia infantile (hypophosphatasia) [MIM:241500]; an inherited metabolic bone disease characterized by defective skeletal mineralization. Four hypophosphatasia forms are distinguished, depending on the age of onset: perinatal, infantile, childhood and adult type. The perinatal form is the most severe and is almost always fatal. Patients with only premature loss of deciduous teeth, but with no bone disease are regarded as having odontohypophosphatasia (odonto).,Function: This isozyme may play a role in skeletal mineralization.,miscellaneous: In most mammals there are four different isozymes: placental, placental-like, intestinal and tissue non-specific (liver/bone/kidney).,online information: Alkaline phosphatase entry,online information: Tissue nonspecific alkaline phosphatase gene mutations database,PTM: Glycosylated.,similarity: Belongs to the alkaline phosphatase family.,subunit: Homodimer.,

Validation Data

Various whole cell lysates were separated by 4-20% SDS-PAGE, and the membrane was blotted with anti-Alkaline Phosphatase (PT1342R) antibody. The HRP-conjugated Goat anti-Rabbit IgG (H + L) antibody was used to detect the antibody. Lane 1: HEK293 Lane 2: Mouse kidney Predicted band size: 57kDa Observed band size: 80kDa
