

eIF4E (Phospho Ser209) (PT1400R) PT™ Rabbit mAb

CatalogNo: YM9242 **Recombinant** 

Key Features

Host Species

- Rabbit

Reactivity

- Human, Mouse, Rat

Applications

- WB, IF, IP, ELISA

MW

- 25kD (Calculated)
25kD (Observed)

Isotype

- IgG, Kappa

Storage

Storage* -15°C to -25°C/1 year (Do not lower than -25°C)

Formulation PBS, 50% glycerol, 0.05% Proclin 300, 0.05% BSA

Recommended Dilution Ratios

WB 1:2000-1:10000

IF 1:200-1:1000

ELISA 1:5000-1:20000

IP 1:50-1:200

Basic Information

Clonality Monoclonal

Clone Number PT1400R

Immunogen Information

Immunogen The specific immunogen used to produce this antibody is proprietary information.

Specificity eIF4E (Phospho Ser209) Antibody detects endogenous levels of eIF4E protein only when phosphorylated at S209. The name of modified sites may be influenced by many factors, such as species (the modified site was not originally found in human samples) and the change of protein sequence (the previous protein sequence is incomplete, and the protein sequence may be prolonged with the development of protein sequencing technology). When naming, we will use the "numbers" in historical reference to keep the sites consistent with the reports. The antibody binds to the following modification sequence (lowercase letters are modification sites):SGsTT

Target Information

Gene name	EIF4E		
Protein Name	Eukaryotic translation initiation factor 4E		
	Organism	Gene ID	UniProt ID
	Human	1977 ;	P06730 ;
	Mouse	13684 ;	P63073 ;
	Rat	117045 ;	P63074 ;
Cellular Localization	Cytoplasm , P-body . Cytoplasm . Cytoplasm , Stress granule . Nucleus . Interaction with EIF4ENIF1/4E-T is required for localization to processing bodies (P-bodies) (PubMed:16157702 , PubMed:24335285 , PubMed:25923732) . Imported in the nucleus via interaction with EIF4ENIF1/4E-T via a piggy-back mechanism (PubMed:10856257) . .		
Tissue specificity	Brain ,Fetal brain ,Placenta ,Pooled ,Small intestine ,Testis ,		
Function	Caution:Was originally thought to be phosphorylated on Ser-53 (PubMed:3112145) ; this was later shown to be wrong (PubMed:7665584) . ,Function:Recognizes and binds the 7-methylguanosine-containing mRNA cap during an early step in the initiation of protein synthesis and facilitates ribosome binding by inducing the unwinding of the mRNAs secondary structures. ,PTM:Phosphorylation increases the ability of the protein to bind to mRNA caps and to form the eIF4F complex. ,similarity:Belongs to the eukaryotic initiation factor 4E family. ,subunit:eIF4F is a multi-subunit complex , the composition of which varies with external and internal environmental conditions. It is composed of at least EIF4A , EIF4E and EIF4G1/EIF4G3. EIF4E is also known to interact with other partners. The interaction with EIF4ENIF1 mediates the import into the nucleus. Nonphosphorylated EIF4EBP1 , EIF4EBP2 and EIF4EBP3 compete with EIF4G1/EIF4G3 to interact with EIF4E; insulin stimulated MAP-kinase (MAPK1 and MAPK3) phosphorylation of EIF4EBP1 causes dissociation of the complex allowing EIF4G1/EIF4G3 to bind and consequent initiation of translation. Rapamycin can attenuate insulin stimulation , mediated by FKBP. Interacts mutually exclusive with EIF4A1 and EIF4A2. Interacts with NGDN and PIWIL2 (By similarity) . Interacts with Lassa virus Z protein. ,		

Validation Data

Various whole cell lysates were separated by 4-20% SDS-PAGE, and the membrane was blotted with anti-eIF4E (Phospho Ser209) (PT1400R) antibody. The HRP-conjugated Goat anti-Rabbit IgG (H + L) antibody was used to detect the antibody. Lane 1: NIH-3T3 Lane 2: NIH-3T3 was treated with Anisomycin (25ug/ml) for 30 minutes Predicted band size: 25kDa Observed band size: 25kDa
