Applications

WB,ELISA

SREBP-2 Rabbit pAb

CatalogNo: YN0037 Orthogonal Validated 💽

Key Features

Host Species Reactivity
• Rabbit • Human, Mouse, Rat

MW Isotype

MW Isotype125kD (Observed)IgG

Recommended Dilution Ratios

WB 1:500-2000 ELISA 1:5000-20000

Storage

Storage* -15°C to -25°C/1 year(Do not lower than -25°C)

Formulation Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide.

I Basic Information

Clonality Polyclonal

Immunogen Information

Immunogen Synthesized peptide derived from human protein . at AA range: 390-470

Specificity SRBP2 Polyclonal Antibody detects endogenous levels of protein.

| Target Information

Gene name SREBF2 BHLHD2 SREBP2

Protein Name

Sterol regulatory element-binding protein 2 (SREBP-2) (Class D basic helix-loop-helix protein 2) (bHLHd2) (Sterol regulatory element-binding transcription factor 2) [Cleaved into: Processed sterol regulatory element-binding protein 2]

Organism	Gene ID	UniProt ID
Human	<u>6721</u> ;	<u>Q12772;</u>
Mouse		Q3U1N2;
Rat		<u>Q3T1I5;</u>

Cellular Localization

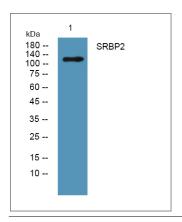

[Sterol regulatory element-binding protein 2]: Endoplasmic reticulum membrane; Multipass membrane protein. Golgi apparatus membrane; Multipass membrane protein. Cytoplasmic vesicle, COPII-coated vesicle membrane; Multipass membrane protein. At high sterol concentrations, the SCAP-SREBP is retained in the endoplasmic reticulum (PubMed:32322062). Low sterol concentrations promote recruitment into COPII-coated vesicles and transport of the SCAP-SREBP to the Golgi, where it is processed (PubMed:32322062). .; [Processed sterol regulatory element-binding protein 2]: Nucleus. Transported into the nucleus with the help of importin-beta. Dimerization of the bHLH domain is a prerequisite for importin beta-dependent nuclear import.

Tissue specificity Ubiquitously expressed in adult and fetal tissues.

Function

Function:Transcriptional activator required for lipid homeostasis. Regulates transcription of the LDL receptor gene as well as the cholesterol and to a lesser degree the fatty acid synthesis pathway (By similarity). Binds the sterol regulatory element 1 (SRE-1) (5'-ATCACCCCAC-3') found in the flanking region of the LDRL and HMG-CoA synthase genes.,PTM:At low cholesterol the SCAP/SREBP complex is recruited into COPII vesicles for export from the ER. In the Golgi complex SREBPs are cleaved sequentially by site-1 and site-2 protease. The first cleavage by site-1 protease occurs within the luminal loop, the second cleavage by site-2 protease occurs within the first transmembrane domain and releases the transcription factor from the Golgi membrane. Apoptosis triggers cleavage by the cysteine proteases caspase-3 and caspase-7..similarity:Belongs to the SREBP family., similarity: Contains 1 basic helix-loop-helix (bHLH) domain., subcellular location: Moves from the endoplasmic reticulum to the Golgi in the absence of sterols., subunit: Forms a tight complex with SCAP in the ER membrane. Efficient DNA binding of the soluble transcription factor fragment requires dimerization with another bHLH protein. Interacts with LMNA, tissue specificity: Ubiquitously expressed in adult and fetal tissues..

Validation Data

Western blot analysis of lysates from HCT116 cells, primary antibody was diluted at $1:1000, 4^{\circ}$ over night
