#### **Function**

Disease: Defects in INS are the cause of familial hyperproinsulinemia [MIM:176730]., Function: Insulin decreases blood glucose concentration. It increases cell permeability to monosaccharides, amino acids and fatty acids. It accelerates glycolysis, the pentose phosphate cycle, and glycogen synthesis in liver., Function: Preptin undergoes glucose-mediated co-secretion with insulin, and acts as physiological amplifier of glucosemediated insulin secretion. Exhibits osteogenic properties by increasing osteoblast mitogenic activity through phosphoactivation of MAPK1 and MAPK3., Function: The insulinlike growth factors possess growth-promoting activity. In vitro, they are potent mitogens for cultured cells. IGF-II is influenced by placental lactogen and may play a role in fetal development., mass spectrometry: PubMed:12586351; PubMed:15359740, online information:Clinical information on Eli Lilly insulin products,online information:Insulin entry, online information: Insulin-like growth factor 2 entry, online information: Protein of the 20th century - Issue 9 of April 2001, pharmaceutical: Available under the names Humulin or Humalog (Eli Lilly) and Novolin (Novo Nordisk). Used in the treatment of diabetes. Humalog is an insulin analog with 52-Lys-Pro-53 instead of 52-Pro-Lys-53., similarity: Belongs to the insulin family., subunit: Heterodimer of a B chain and an A chain linked by two disulfide bonds...

## **I** Validation Data

Western blot analysis of lysates from HCT116 cells, primary antibody was diluted at 1:1000, 4° over night
