

# HMGA1 Rabbit pAb

CatalogNo: YN2897

# Key Features

Host Species
• Rabbit
MW

11kD (Observed)

Reactivity
• Human,Mouse,Rat
Isotype

• IgG

ApplicationsWB,ELISA

### **Recommended Dilution Ratios**

WB 1:500-2000 ELISA 1:5000-20000

### **Storage**

Storage*	-15°C to -25°C/1 year(Do not lower than -25°C)
Formulation	Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide.

#### **Basic Information**

Clonality Polyclonal

#### Immunogen Information

ImmunogenSynthesized peptide derived from part region of human protein AA range: 1-50SpecificityHMGA1 Polyclonal Antibody detects endogenous levels of protein.

## **Target Information**

Gene name HMGA1 HMGIY

#### **Protein Name**

High mobility group protein HMG-I/HMG-Y (HMG-I(Y)) (High mobility group AT-hook protein 1) (High mobility group protein A1) (High mobility group protein R)

Organism	Gene ID	UniProt ID
Human	<u>3159;</u>	<u>P17096;</u>
Mouse	<u>111241;</u>	<u>P17095;</u>
Rat	<u>117062;</u>	<u>Q8K585;</u>

# Cellular Nucleus. Chromosome.

#### **Tissue specificity** B-cell,Colon,Epithelium,Kidney,Liver,Mammary gland,Muscle,Pancreas,Placenta

**Function** Disease: A chromosomal aberration involving HMGA1 is found in pulmonary chondroid hamartoma. Translocation t(6;14)(p21;g23-24) with RAD51L1., Function: HMG-I/Y bind preferentially to the minor groove of A+T rich regions in double stranded DNA. It is suggested that these proteins could function in nucleosome phasing and in the 3'-end processing of mRNA transcripts. They are also involved in the transcription regulation of genes containing, or in close proximity to A+T-rich regions.,mass spectrometry:With 1 acetyl and 2 phosphate groups PubMed:15302935, mass spectrometry: With 1 acetyl and 3 phosphate groups PubMed:15302935.mass spectrometry: With 1 acetyl, 1 methyl and 2 phosphate groups PubMed:15302935, mass spectrometry: With 1 acetyl, 1 methyl and 3 phosphate groups PubMed:15302935,mass spectrometry:With 1 acetyl, 2 methyl and 2 phosphate groups PubMed:15302935,mass spectrometry:With 1 acetyl, 2 methyl and 3 phosphate groups PubMed:15302935,PTM:Constitutively phosphorylated on two or three sites. Phosphorylated upon DNA damage, probably by ATM or ATR. Hyperphosphorylated at early stages of apoptosis, followed by dephosphorylation and methylation, which coincides with chromatin condensation. Isoform HMG-Y can be phosphorylated by HIPK2., PTM: HMG-Y is not methylated., PTM: Methylation at Arg-58 is mutually exclusive with methylation at Arg-60., similarity: Belongs to the HMGA family., similarity: Contains 3 A.T hook DNA-binding domains., subunit: Interacts with HIPK2 (By similarity). Interacts with HIV-1 pre-integration complex.,
