### Basic Information

**Clonality** Polyclonal

### Immunogen Information

**Immunogen** The antiserum was produced against synthesized peptide derived from human Calnexin around the phosphorylation site of Ser583. AA range:543-592

## Specificity

Phospho-Calnexin (S583) Polyclonal Antibody detects endogenous levels of Calnexin protein only when phosphorylated at S583. The name of modified sites may be influenced by many factors, such as species (the modified site was not originally found in human samples) and the change of protein sequence (the previous protein sequence is incomplete, and the protein sequence may be prolonged with the development of protein sequencing technology). When naming, we will use the "numbers" in historical reference to keep the sites consistent with the reports. The antibody binds to the following modification sequence (lowercase letters are modification sites):NRsPR

### Cellular Localization

Endoplasmic reticulum membrane ; Single-pass type I membrane protein . Endoplasmic reticulum . Melanosome . Identified by mass spectrometry in melanosome fractions from stage I to stage IV (PubMed:12643545 , PubMed:17081065) . The palmitoylated form preferentially localizes to the perinuclear rough ER (PubMed:22314232) . .

**Tissue specificity** B-cell lymphoma ,Epithelium ,Fibroblast ,Keratinocyte ,Kidney ,Liver ,Lymph ,Placenta ,Platelet ,

### Function

Function:Calcium-binding protein that interacts with newly synthesized glycoproteins in the endoplasmic reticulum. It may act in assisting protein assembly and/or in the retention within the ER of unassembled protein subunits. It seems to play a major role in the quality control apparatus of the ER by the retention of incorrectly folded proteins. ,online information:Calnexin entry ,similarity:Belongs to the calreticulin family. ,subcellular location:Identified by mass spectrometry in melanosome fractions from stage I to stage IV. ,
