Basic Information

Clonality Polyclonal

Immunogen Information

Immunogen The antiserum was produced against synthesized peptide derived from human MAP2K7 around the phosphorylation site of Ser271. AA range:236-285

Specificity

Phospho-MEK-7 (S271) Polyclonal Antibody detects endogenous levels of MEK-7 protein only when phosphorylated at S271. The name of modified sites may be influenced by many factors, such as species (the modified site was not originally found in human samples) and the change of protein sequence (the previous protein sequence is incomplete, and the protein sequence may be prolonged with the development of protein sequencing technology). When naming, we will use the "numbers" in historical reference to keep the sites consistent with the reports. The antibody binds to the following modification sequence (lowercase letters are modification sites): VDSKA

Target Information

Cellular Localization Nucleus. Cytoplasm .

Tissue specificity Ubiquitous; with highest level of expression in skeletal muscle. Isoform 3 is found at low levels in placenta , fetal liver , and skeletal muscle.

Function Catalytic activity: ATP + a protein = ADP + a phosphoprotein. ,cofactor:Magnesium. ,enzyme regulation:Activated by phosphorylation by specific MAP kinase kinase kinases such as MAP3K1/MEKK1 , MAP3K3/MEKK3 , MAP3K11/MLK3 and MAP3K12/DLK. ,Function:Stress activated , dual specificity kinase that activates the JUN kinases MAPK8/JNK1 , MAPK9/JNK2 and MAPK10/JNK3. ,PTM:Activated by phosphorylation on Ser/Thr. ,similarity:Belongs to the protein kinase superfamily. STE Ser/Thr protein kinase family. MAP kinase kinase subfamily. ,similarity:Contains 1 protein kinase domain. ,tissue specificity:Ubiquitous; with highest level of expression in skeletal muscle. Isoform 3 is found at low levels in placenta , fetal liver , and skeletal muscle. ,
