Basic Information

Clonality Polyclonal

Immunogen Information

Immunogen The antiserum was produced against synthesized peptide derived from mouse Kir5.1 around the phosphorylation site of Ser417. AA range:369-418

Specificity

Phospho-KIR5.1 (S416) Polyclonal Antibody detects endogenous levels of KIR5.1 protein only when phosphorylated at S416. The name of modified sites may be influenced by many factors, such as species (the modified site was not originally found in human samples) and the change of protein sequence (the previous protein sequence is incomplete, and the protein sequence may be prolonged with the development of protein sequencing technology). When naming, we will use the "numbers" in historical reference to keep the sites consistent with the reports. The antibody binds to the following modification sequence (lowercase letters are modification sites):MEsQM

Target Information

Gene name KCNJ16

Protein Name Inward rectifier potassium channel 16

Organism	Gene ID	UniProt ID
Human	16517 ;	Q9NPI9 ;
Mouse	16517 ;	Q9Z307 ;
