Cellular Localization

Cytoplasm . Nucleus . Both phosphorylation and cell density can regulate its subcellular localization (PubMed:18158288 , PubMed:20048001) . Phosphorylation sequesters it in the cytoplasm by inhibiting its translocation into the nucleus (PubMed:18158288 , PubMed:20048001) . At low density , predominantly nuclear and is translocated to the cytoplasm at high density (PubMed:18158288 , PubMed:20048001 , PubMed:25849865) . PTPN14 induces translocation from the nucleus to the cytoplasm (PubMed:22525271) . Localized mainly to the nucleus in the early stages of embryo development with expression becoming evident in the cytoplasm at the blastocyst and epiblast stages (By similarity) . .

Tissue specificity

Increased expression seen in some liver and prostate cancers. Isoforms lacking the transactivation domain found in striatal neurons of patients with Huntington disease (at protein level) .

Function

PTM:Phosphorylated upon DNA damage , probably by ATM or ATR. ,similarity:Contains 1 WW domain. ,subunit:Binds to the SH3 domain of the YES kinase. Binds to WBP1 and WBP2. Binds , in vitro , through the WW1 domain , to neural isoforms of ENAH that contain the PPSY motif. ,
