

# JAK3 (Phospho Tyr981) Rabbit pAb

CatalogNo: YP1866

## Key Features

Host Species

Rabbit

Reactivity • Human,Mouse,Rat

Applications

IHC,WB

MW • 125kD (Observed)

#### **Recommended Dilution Ratios**

WB 1:500-2000 IHC 1:50-200

### **Storage**

Storage*	-15°C to -25°C/1 year(Do not lower than -25°C)
Formulation	Liquid in PBS containing 50% glycerol, and 0.02% sodium azide.

### **Basic Information**

Clonality Polyclonal

#### Immunogen Information

Immunogen	Synthesized peptide derived from human JAK3 (Phospho Tyr981)
Specificity	This antibody detects endogenous levels of JAK3 (Phospho Tyr981) Rabbit pAb at Human, Mouse,Rat

### **Target Information**

JAK3

Gene name

#### **Protein Name**

Tyrosine-protein kinase JAK3 (Janus kinase 3) (JAK-3) (Leukocyte janus kinase) (L-JAK)

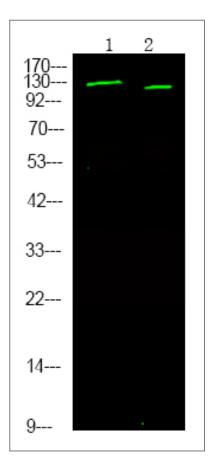

Organism	Gene ID	UniProt ID
Human	<u>3718;</u>	<u>P52333;</u>
Mouse	<u>16453;</u>	<u>Q62137;</u>
Rat		<u>Q63272;</u>

Cellular Endomembrane system ; Peripheral membrane protein . Cytoplasm .

Localization

- **Tissue specificity** In NK cells and an NK-like cell line but not in resting T-cells or in other tissues. The S-form is more commonly seen in hematopoietic lines, whereas the B-form is detected in cells both of hematopoietic and epithelial origins.
- Catalytic activity:ATP + a [protein]-L-tyrosine = ADP + a [protein]-L-tyrosine Function phosphate., Disease: Defects in JAK3 are a cause of severe combined immunodeficiency autosomal recessive T-cell-negative/B-cell-positive/NK-cell-negative (T(-)B(+)NK(-)SCID) [MIM:600802]. SCID refers to a genetically and clinically heterogeneous group of rare congenital disorders characterized by impairment of both humoral and cell-mediated immunity, leukopenia, and low or absent antibody levels. Patients with SCID present in infancy with recurrent, persistent infections by opportunistic organisms. The common characteristic of all types of SCID is absence of T-cell-mediated cellular immunity due to a defect in T-cell development...Domain:Possesses two phosphotransferase domains. The second one probably contains the catalytic domain (By similarity), while the presence of slight differences suggest a different role for domain 1., Function: Tyrosine kinase of the nonreceptor type, involved in the interleukin-2 and interleukin-4 signaling pathway. Phosphorylates STAT6, IRS1, IRS2 and PI3K, online information: IAK3 mutation db,PTM:Tyrosine phosphorylated in response to IL-2 and IL-4., similarity:Belongs to the protein kinase superfamily. Tyr protein kinase family. JAK subfamily., similarity: Contains 1 FERM domain., similarity: Contains 1 protein kinase domain., similarity: Contains 1 SH2 domain., subcellular location: Wholly intracellular, possibly membrane associated., subunit: Interacts with STAM2 and MYO18A (By similarity). Interacts with SHB., tissue specificity: In NK cells and an NK-like cell line but not in resting T-cells or in other tissues. The S-form is more commonly seen in hematopoietic lines, whereas the B- and Mforms are detected in cells both of hematopoietic and epithelial origins.,

### Validation Data

Western Blot analysis of HeLa cell ,using primary antibody at 1:1000 dilution. Secondary antibody(catalog#:RS23920) was diluted at 1:10000

#### **Contact information**
