

# JIP-3 Rabbit pAb

CatalogNo: YT2436

# **Key Features**

**Host Species** 

Rabbit

MW

Reactivity

• Human Mo

Human, Mouse

Applications

WB,IHC,IF,ELISA

• 170kD (Observed)

Isotype

IgG

# Recommended Dilution Ratios

WB 1:500-1:2000 IHC 1:100-1:300 IF 1:200-1:1000 ELISA 1:20000

Not yet tested in other applications.

# Storage

Storage\* -15°C to -25°C/1 year(Do not lower than -25°C)

**Formulation** Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide.

## **Basic Information**

**Clonality** Polyclonal

# Immunogen Information

Immunogen The antiserum was produced against synthesized peptide derived from human JIP3. AA

range:621-670

**Specificity** JIP-3 Polyclonal Antibody detects endogenous levels of JIP-3 protein.

# | Target Information

**Gene name** 

MAPK8IP3

**Protein Name** 

C-Jun-amino-terminal kinase-interacting protein 3

Organism	Gene ID	UniProt ID
Human	<u>23162;</u>	Q9UPT6;
Mouse	<u>30957;</u>	Q9ESN9;

### Cellular Localization

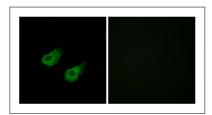

Cytoplasm . Golgi apparatus . Cytoplasmic vesicle . Cell projection, growth cone . Cell projection, axon . Cell projection, dendrite . Cytoplasm, perinuclear region . Localized in the soma and growth cones of differentiated neurites and the Golgi and vesicles of the early secretory compartment of epithelial cells. KIF5A/B/C-mediated transportation to axon tips is essential for its function in enhancing neuronal axon elongation. .

**Tissue specificity** Brain, Epithelium, Melanoma, Spleen,

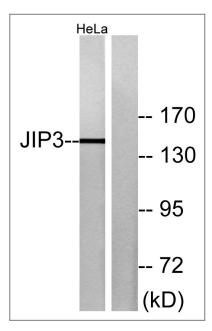

#### **Function**

Function:The JNK-interacting protein (JIP) group of scaffold proteins selectively mediates JNK signaling by aggregating specific components of the MAPK cascade to form a functional JNK signaling module. May function as a regulator of vesicle transport, through interations with the JNK-signaling components and motor proteins.,PTM:Phosphorylated upon DNA damage, probably by ATM or ATR.,similarity:Belongs to the JIP scaffold family.,subunit:Forms homoor heterooligomeric complexes. The central region of MAPK8IP3 interacts with the C-terminal of MAPK8IP2 but not MAPK8IP1. Binds specific components of the JNK signaling pathway namely MAPK8, MAPK9 and MAPK10 to the N-terminal region, MAP2K4 and MAP2K7 to the central region and MAP3K11 to the C-terminal region. Binds the TPR motif-containing C-terminal of kinesin light chain, KLC1. Pre-assembled MAPK8IP1 scaffolding complexes are then transported as a cargo of kinesin, to the required subcellular location.,

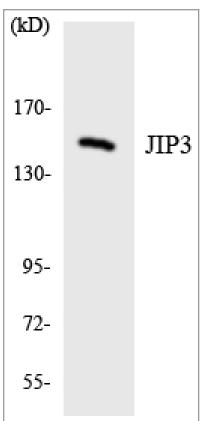

## Validation Data

Immunofluorescence analysis of HeLa cells, using JIP3 Antibody. The picture on the right is blocked with the synthesized peptide.

Western blot analysis of lysates from HeLa cells, using JIP3 Antibody. The lane on the right is blocked with the synthesized peptide.

Western blot analysis of the lysates from HepG2 cells using JIP3 antibody.
