**Tissue specificity** Epithelium, Liver, Placenta, Skeletal muscle,

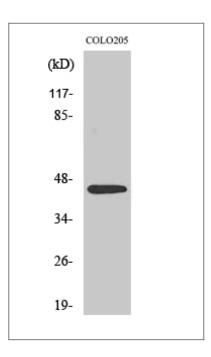

**Function** 

Disease:Sera from patients with systemic lupus erythematosus (SLE) often contain antibodies that react with the normal cellular La protein as if this antigen was foreign., Function: La protein plays a role in the transcription of RNA polymerase III. It is most probably a transcription termination factor. Binds to the 3' termini of virtually all nascent polymerase III transcripts. It is associated with precursor forms of RNA polymerase III transcripts including tRNA and 4.5S, 5S, 7S, and 7-2 RNAs.,PTM:Phosphorylated. The phosphorylation sites are at the C-terminal part of the protein., PTM: The N-terminus is blocked..similarity:Contains 1 HTH La-type RNA-binding domain..similarity:Contains 1 RRM (RNA recognition motif) domain., subunit: Interacts with DDX15. May interact with RUFY1.,
