FunctionDisease:Defects in KIAA0196 are the cause of spastic paraplegia autosomal dominant type
8 (SPG8) [MIM:603563]. Spastic paraplegia is a neurodegenerative disorder characterized
by a slow, gradual, progressive weakness and spasticity of the lower limbs. Spastic
paraplegia is a neurodegenerative disorder characterized by a slow, gradual, progressive
weakness and spasticity of the lower limbs. Rate of progression and the severity of
symptoms are quite variable. Initial symptoms may include difficulty with balance,
weakness and stiffness in the legs, muscle spasms, and dragging the toes when walking. In
some forms of the disorder, bladder symptoms (such as incontinence) may appear, or the
weakness and stiffness may spread to other parts of the body.,similarity:Belongs to the
strumpellin family.,tissue specificity:Expressed ubiquitously.,

Validation Data

Western blot analysis of lysates from THP-1 cells, primary antibody was diluted at 1:1000, 4° over night

Immunohistochemical analysis of paraffin-embedded human Colon cancer. 1, Antibody was diluted at 1:200(4° overnight). 2, Tris-EDTA,pH9.0 was used for antigen retrieval. 3,Secondary antibody was diluted at 1:200(room temperature, 45min).
