**Applications** 

WB

# **H2A2B** Rabbit pAb

CatalogNo: YT7569

## **Key Features**

**Host Species** Reactivity

 Rabbit Human, Mouse

MW Isotype

 14kD (Calculated) IgG

#### Recommended Dilution Ratios

WB 1:500-2000

## Storage

-15°C to -25°C/1 year(Do not lower than -25°C) Storage\*

**Formulation** Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide.

### **Basic Information**

**Clonality** Polyclonal

### Immunogen Information

**Immunogen** Synthesized peptide derived from human H2A2B AA range: 15-65

**Specificity** This antibody detects endogenous levels of H2A2B at Human/Mouse

## | Target Information

**Gene name** HIST2H2AB

#### **Protein Name**

H2A2B

Organism	Gene ID	UniProt ID
Human	<u>317772;</u>	Q8IUE6;
Mouse	<u>621893</u> ;	<u>Q64522;</u>

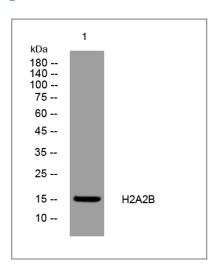

#### Cellular Localization

Nucleus. Chromosome.

#### **Function**

Function: Core component of nucleosome. Nucleosomes wrap and compact DNA into chromatin, limiting DNA accessibility to the cellular machineries which require DNA as a template. Histones thereby play a central role in transcription regulation, DNA repair, DNA replication and chromosomal stability. DNA accessibility is regulated via a complex set of post-translational modifications of histones, also called histone code, and nucleosome remodeling., PTM: Deiminated on Arg-4 in granulocytes upon calcium entry..PTM:Monoubiquitination of Lvs-120 by RING1 and RNF2/RING2 complex gives a specific tag for epigenetic transcriptional repression and participates in X chromosome inactivation of female mammals. It is involved in the initiation of both imprinted and random X inactivation. Ubiquitinated H2A is enriched in inactive X chromosome chromatin. Ubiquitination of H2A functions downstream of methylation of 'Lys-27' of histone H3. Monoubiquitination of Lys-120 by RNF2/RING2 can also be induced by ultraviolet and may be involved in DNA repair. Following DNA double-strand breaks (DSBs), it is ubiquitinated through 'Lys-63' linkage of ubiquitin moieties by the E2 ligase UBE2N and the E3 ligases RNF8 and RNF168, leading to the recruitment of repair proteins to sites of DNA damage. Monoubiquitination and ionizing radiation-induced 'Lys-63'-linked ubiquitination are distinct events..PTM:Phosphorylation on Ser-2 is enhanced during mitosis. Phosphorylation on Ser-2 by RPS6KA5/MSK1 directly represses transcription. Acetylation of H3 inhibits Ser-2 phosphorylation by RPS6KA5/MSK1.,PTM:Symmetric dimethylation on Arg-4 by the PRDM1/PRMT5 complex may play a crucial role in the germ-cell lineage.,PTM:The chromatin-associated form is phosphorylated on Thr-121 during mitosis., similarity: Belongs to the histone H2A family., subunit: The nucleosome is a histone octamer containing two molecules each of H2A, H2B, H3 and H4 assembled in one H3-H4 heterotetramer and two H2A-H2B heterodimers. The octamer wraps approximately 147 bp of DNA.,

## Validation Data

Western blot analysis of lysates from DU145 cells, primary antibody was diluted at 1:1000, 4° over night
