

GAPDH (2B8) Mouse mAb (AbFluor 488)

CatalogNo: YM2045

Key Features

Host Species Reactivity Applications
• Mouse • WB,IF,IHC

Human, Mouse, Rat, Mk, Dg, Ch, Hamster, Rabbit, Pig, sheep, Insect, Yeast

IsotypeIgG1ConjugateAbFluor 488

I Recommended Dilution Ratios

Optimal working dilutions should be determined experimentally by the investigator Suggested starting dilutions are as follows:IHC 1:200 IF 1:200.

Storage

Storage* Stable for one year at -15°C to -25°C from date of shipment. For maximum recovery of

product, centrifuge the original vial after thawing and prior to removing the cap. Aliquot

to avoid repeated freezing and thawing. Store in dark.

Formulation Liquid in PBS, pH 7.4, containing 0.02% sodium azide as preservative and 50% Glycerol.

Basic Information

Clonality Monoclonal

Clone Number 2B8

Immunogen Information

Specificity GAPDH Monoclonal Antibody(2B8) AbFluor™ 488 Conjugated specially designed for your

Immunofluorescence analysis.

Target Information

Gene name

GAPDH

Protein Name

Glyceraldehyde-3-phosphate dehydrogenase

Organism	Gene ID	UniProt ID
Human	<u>2597;</u>	<u>P04406;</u>
Mouse	100042025;	<u>P16858;</u>
Rat	<u>24383;</u>	<u>P04797;</u>

Cellular Localization Cytoplasm, cytosol . Nucleus . Cytoplasm, perinuclear region . Membrane . Cytoplasm, cytoskeleton. Translocates to the nucleus following S-nitrosylation and interaction with SIAH1, which contains a nuclear localization signal (By similarity). Postnuclear and Perinuclear regions (PubMed:12829261). .

Tissue specificity Astrocytoma, Brain, Cajal-Retzius cell, Colon adenocarcinoma, Epitheliu

Function

Catalytic activity:D-glyceraldehyde 3-phosphate + phosphate + NAD(+) = 3-phospho-Dglyceroyl phosphate + NADH., Function: Independent of its glycolytic activity it is also involved in membrane trafficking in the early secretory pathway, online information:Glyceraldehyde 3-phosphate dehydrogenase entry,pathway:Carbohydrate degradation: glycolysis: pyruvate from D-glyceraldehyde 3-phosphate: step 1.,pathway:Carbohydrate degradation; glycolysis; pyruvate from D-glyceraldehyde 3phosphate: step 1/5..PTM:Reversible S-nitrosylation of Cys-152 inhibits enzymatic activity and increases endogenous ADP-ribosylation, which inhibits the enzyme in a non-reversible manner. The latter modification is more likely to be a pathophysiological event associated with inhibition of gluconeogenesis., sequence Caution: Differs quite

extensively., similarity: Belongs to the glyceraldehyde-3-phosphate dehydrogenase

family., subcellular location: Postnuclear and Perinuclear

regions., subunit: Homotetramer., subunit: Homotetramer. Binds PRKCI.,
