Lamin B1 (7C11) Mouse mAb (AbFluor 405)

CatalogNo: YM2101 Comparable Abs

Key Features

Host Species Mouse 	ReactivityHuman,Rat,Mouse	Applications WB,IHC,IF,IP
Isotype • IgG	Conjugate • AbFluor 405	

Recommended Dilution Ratios

Optimal working dilutions should be determined experimentally by the investigator Suggested starting dilutions are as follows:IHC 1:50-300 IF 1:200.

Storage

Storage*	Stable for one year at -15°C to -25°C from date of shipment. For maximum recovery of product, centrifuge the original vial after thawing and prior to removing the cap. Aliquot to avoid repeated freezing and thawing. Store in dark.
Formulation	Liquid in PBS, pH 7.4, containing 0.02% sodium azide as preservative and 50% Glycerol.

Basic Information

Clonality	Monoclonal
Clone Number	7C11

Immunogen Information

Specificity Lamin B1 Monoclonal Antibody(7C11) AbFluor[™] 405 Conjugated specially designed for your Immunofluorescence analysis.

Target Information

Gene name	LMNB1		
Protein Name	Lamin-B1		
	Organism	Gene ID	UniProt ID
	Human	<u>4001;</u>	<u>P20700;</u>
Cellular Localization	Nucleus lamina .		
Tissue specificity	Brain,Cajal-Retzius cell,Epithelium,Eye,Fetal brain cortex,Ovarian carcinoma,Placenta,Uterus,		
Function	Disease:Defects in LMNB1 are the cause of leukodystrophy demyelinating autosomal dominant adult-onset (ADLD) [MIM:169500]. ADLD is a slowly progressive and fatal demyelinating leukodystrophy, presenting in the fourth or fifth decade of life. Clinically characterized by early autonomic abnormalities, pyramidal and cerebellar dysfunction, and symmetric demyelination of the CNS. It differs from multiple sclerosis and other demyelinating disorders in that neuropathology shows preservation of oligodendroglia in the presence of subtotal demyelination and lack of astrogliosis.,Function:Lamins are components of the nuclear lamina, a fibrous layer on the nucleoplasmic side of the inner nuclear membrane, which is thought to provide a framework for the nuclear envelope and may also interact with chromatin.,miscellaneous:The structural integrity of the lamina is strictly controlled by the cell cycle, as seen by the disintegration and formation of the nuclear a series of modifications, such as farnesylation and phosphorylation. Increased phosphorylation of the lamina sociations.,similarity:Belongs to the intermediate filament family.,subunit:Interacts with lamin-associated polypeptides IA, IB and 2.,
